Types of Information Major classification of data: analog vs digital Analog signals speech (but words are discrete) music (closer to a continuous signal) temperature readings, barometric pressure, wind speed images stored on film Analog signals can be represented (approximately) using bits audio: 8, 16, 24 bits per sample digitized images (can be compressed using JPEG)

Lesson 21: Analog to Digital Conversion

In a digital communication system, a digital signal is received (receiver decides 0s or 1s), regenerated (digital signal recreated based on the 0s and 1s), and then retransmitted at each station With signal regeneration, the noise can be eliminated at each station This can only be done in digital communication systems
